

SEBA with Microplug OLT

Presenters

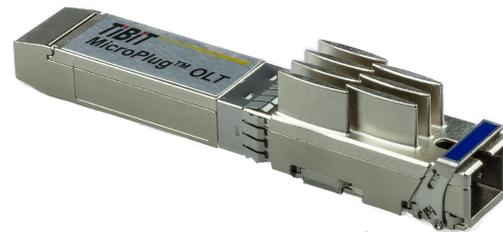

Chip Boling, Tibit Communications

Hagen Woesner, BISDN

Durga Bodla, Delta Electronics

Microplug OLT

- 10 Gigabit OLT implemented in a single SFP+ Optical Transceiver
 - ITU-T G.987 XGS-PON compliant
 - 10G Ethernet-to-PON (XGS-PON or EPON) MAC Bridge (L2/L3 switching, traffic shaping, ...)
 - 32-bit RISC CPU
 - Boot Loader + Firmware
- Control plane external to OLT (VOLTHA)
 - Interfaces with Microplug firmware via IEEE 1904.2 Layer 2 protocol

Saving Boxes in SEBA

- plug OLT directly into leaf switches
- no additional OLT boxes
- single leaf switch with 48 ports can take up to 6K subscribers

Problem: Leaf switch is part of fabric *and* vOLTHA

- Fabric control (trellis) works on top of ONOS
- OLT control is done in vOLTHA
 - no BAL here, no OLT aggregation
- need control interface to both ONOS and vOLTHA adapter

Solution: create **second control interface** on switch

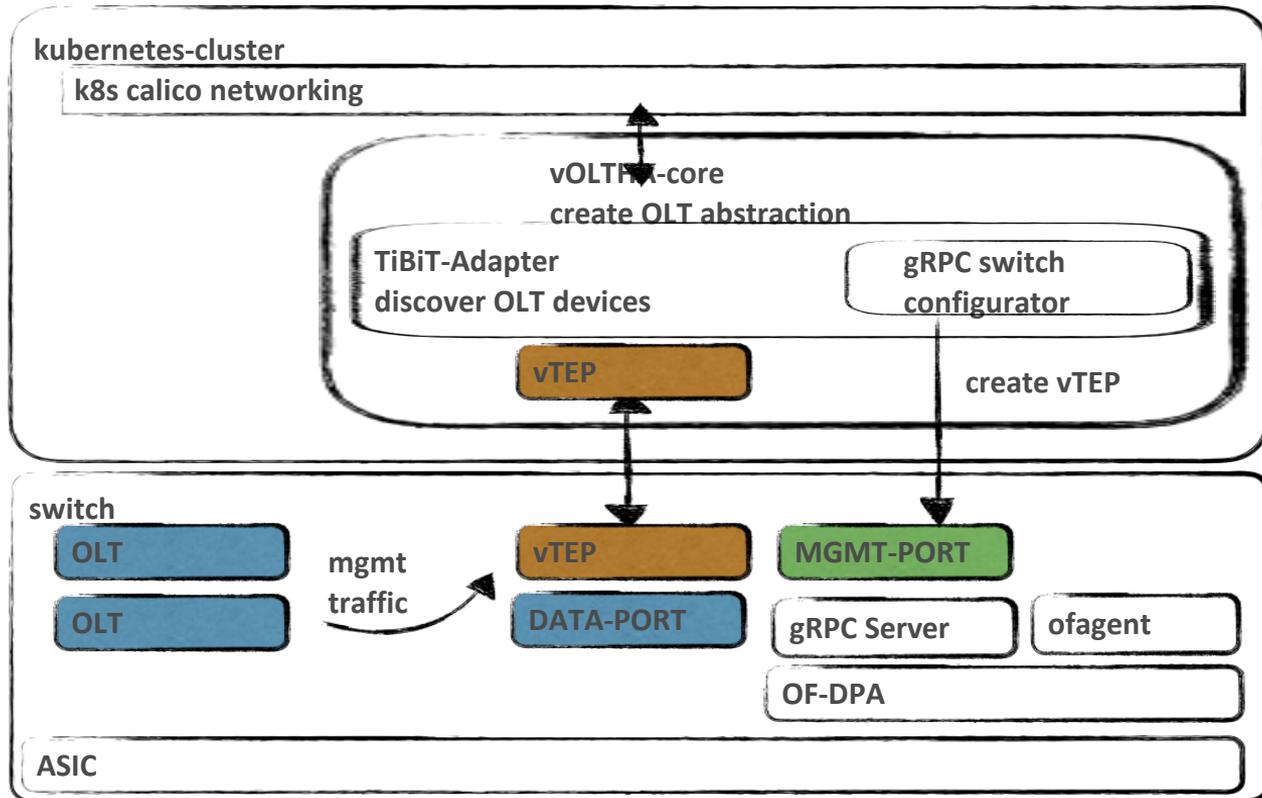

gRPC interface from vOLTHA adapter, OpenFlow from ONOS

no real control virtualization, no 'flowvisor'

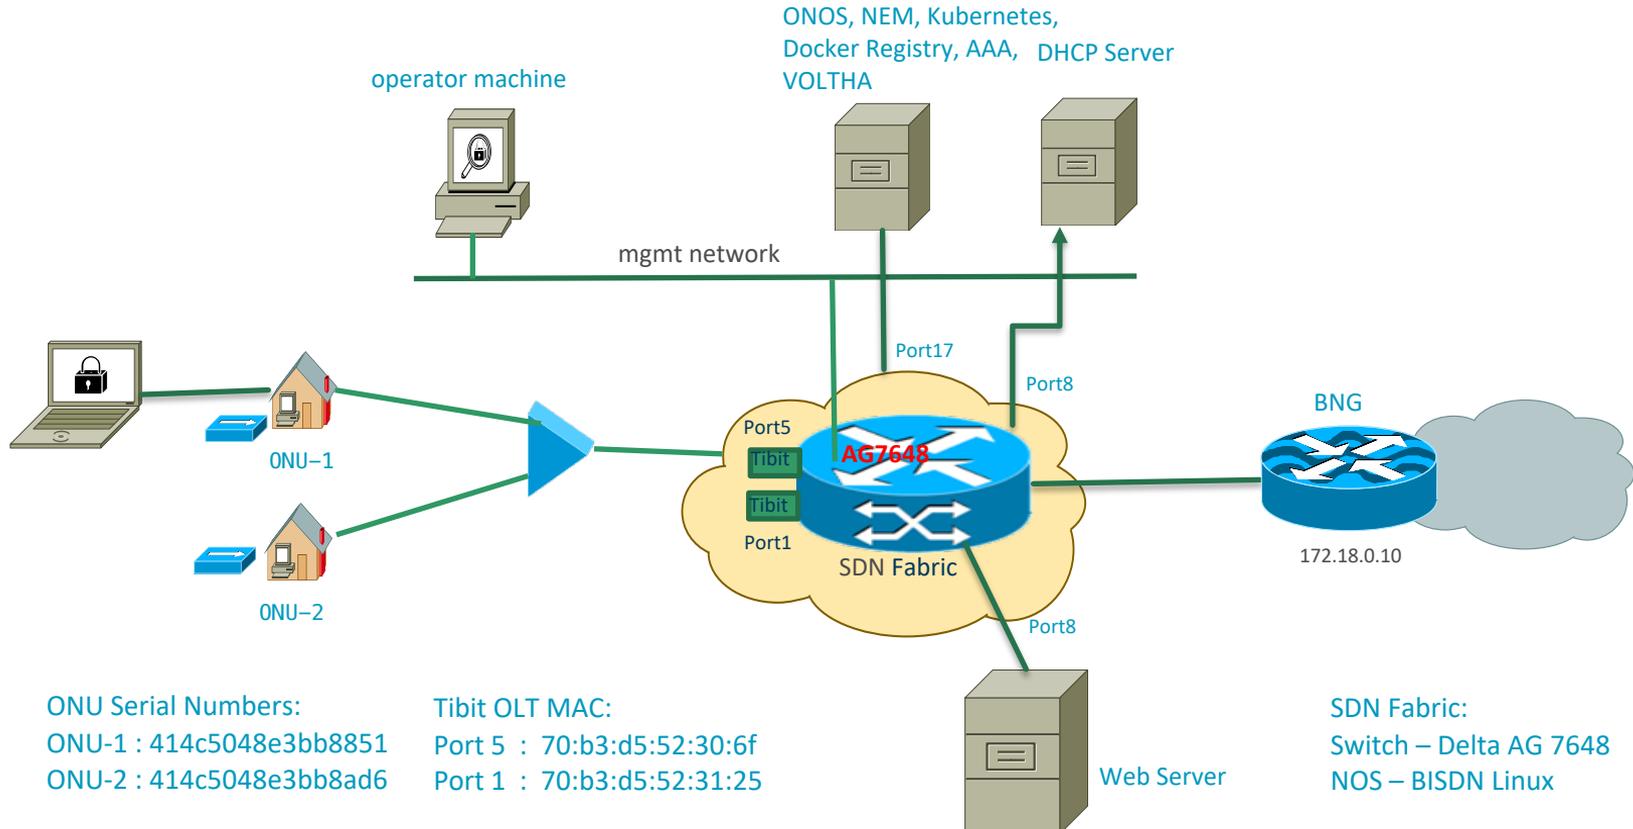

Schematic of grpc/OF coexistence in k8s

- currently working on vOLTHA 1.6
