

5G Connected Edge Cloud for Industry 4.0 Transformation

How to build a private cellular network & transform industry

Jacob Reeb & Colin Campbell
Cambridge Consultants

2020

Scale, reach & expertise for complex global projects

- 60+ years
- 900+ team
- 90% engineers, designers & scientists
- 100 laboratories
- 200,000sqft of development facilities
- 400+ projects per year
- 70% repeat business
- 6 offices

Industries face extraordinary change

- **80%** of executives think their business models will be disrupted soon
- **Only 16%** of CEOs believe their company is stronger than competitors
- **54%** of companies have difficulty connecting business strategy to innovation strategy

Megatrend:

Wireless is evolving to offer flexible software defined intelligence

- Wireless networks are becoming distributed data centres
- Combining networks & compute brings huge value...
- & 5G offers flexibility deployment
- ...but wireless is constrained by physics, making customization difficult

Ambition:

Achieve automation with
a centralized 'brain'

Challenge: achieving high connection
density with high reliability/low latency

Private network success factors

- Design predictability into the network through low-level customization
- Increase the network-node density to reduce the connection density
- Distribute the 'brain' to the bots to reduce the load on the network

Ambition:

Monitor & control
assets remotely

Challenge: balancing high-capacity
coverage with low-capacity backhaul

Private network success factors

- Move intelligence & decision making to the edge
- Use smart antennas to direct coverage to where it is needed
- Continuously optimize & adapt the network to meet changing needs

Ambition:

Train systems to perceive the world & make critical decisions

Challenge: building wireless solutions that manage high compute applications

Private network success factors

- Co-design the wireless & AI systems
- Optimize the AI models to run on limited resources at the edge
- Distribute the training & adaptation of the models
- Collect only the data you need
